FIBERGLASS DOOR FRAMES

# FIBERGLASS DOOR FRAMES

Fiberglass building products can increase the energy efficiency of a building.

## Make a Lasting Impression

The entry to your home creates a “first impression.” You wouldn’t consider encasing a famous painting with a scratched or warped frame; the same concept applies to the entrance to your home. Tecton® Products fiberglass door frames are built to last and are the ideal choice for a truly beautiful focal point.

## Built to Last

Fiberglass door frames outperform wood, vinyl and aluminum-clad door frames. Whether you’re working on a remodeling project or new construction, fiberglass door frames are stronger and more durable compared to wood or other clad door frames.

- Virtually maintenance free
- Storm door ready
- Stronger than wood or vinyl
- No shims needed with our innovative installation clips
- Resistant to scratches, dents, rot and moisture
- Remains stable at all temperatures from desert heat to extreme cold
- No insect problems

## Cost-effective and Energy Efficient

Fiberglass door frames are built to withstand extreme weather conditions without expanding, contracting or shifting like vinyl or aluminum. Less frame movement means a tighter seal and fewer air gaps making it a more cost-effective and energy-efficient choice.

## Durable Strength and Easy Care

Unlike wood door frames, which attract insects and require time-consuming maintenance to keep them from rotting, fiberglass door frames are easy to clean and virtually maintenance free. Our patented Durion® acrylic finish comes in a wide selection of colors to match common window colors and creates a perfect match for Integrity® and Infinity® windows.

Stone White

Cashmere

Pebble Gray

Earthtone

Bronze

Bahama Brown

Evergreen

## Call Us Today!

Tecton’s building system includes structural siding, architectural trim and door frames. We also produce the fiberglass framing for Integrity® and Infinity® windows and offer custom fiberglass pultrusions for other OEM applications.
